

FABER COOKER HOODS
2018 COLLECTION

CHOOSING A “GREEN” PRODUCT IS EASIER THAN EVER BEFORE, THANKS TO THE FULLY TRANSPARENT ENERGY LABEL!

1_Energy Class: this is the energy efficiency of the hood. This parameter takes into account the hood's power consumption both for extraction purposes and for lighting: the lower the power consumption, the higher the class.

Basically, the energy class is defined by an Energy Efficiency Index (EEI) parameter obtained as the ratio between the actual consumption of the hood in question and the consumption of a standard hood: the closer the actual consumption of the hood to the standard consumption, the lower the EEI and the higher the class (A, B, C, etc.).

2_AEC: this is the the annual electricity consumption of the hood, estimating the light of the hood to be kept on for 120 minutes a day and the hood to be operational for 60 minutes a day.

3_FDE: this is the fluid dynamic efficiency of the hood. At constant power consumption, the greater the hood efficiency, the greater the air extraction; or, at constant air extraction, the greater the hood efficiency, the lower the power consumption.

4_LE: this is the lighting efficiency of the hood. At constant illuminating capacity, the greater the hood efficiency, the lower the power consumption.

5_GFE: this is the grease filtering efficiency of the hood, i.e. how much grease the filter can retain.

6_NOISE: noise of the hood at maximum, not intensive speed.

BEST IN THE WORLD FOR EXCELLENCE

- We were the first in the kitchen hood sector to obtain an ISO 9001 company qualitysystem certificate.
- System integrated with Quality, Safety and Environment certified by SGS respecting the ISO 9001:2000, OHSAS 18001 and ISO 14001 norms.
- We have received the SGS Excellence Certificate, the absolute first in the world, n°001.
- The main international bodies for certification and approval have honored Faber's commitment to quality allowing our trial laboratory to carry out tests which recognize the conformity of products with the most stringent security requirements.
- All Faber hoods conform to European safety standards (EC mark of conformity), and have also been certified by the IMQ, a reliable, independent organisation further guaranteeing clients on quality (IMQ mark of security).

AIR MATTERS

Air is without
substance:
a free spirit.
At Faber we can
weigh it,
measure it,
adapt it and
shape it like
solid matter.
Air has been
our substance for
more than
60 years.
Air technology is
the reason
we work.
We are confident
about our
achievements
because we know
how to handle it.

ENERGY SAVING

The greenest brand.

STEAM OFF SYSTEM

Banish steam from your kitchen.

4 / FABER

NAUTILUS

Lower consumption. Higher efficiency.

SIL-K ACT

Stop that noise!

UP & DOWN TECHNOLOGY

Freedom of movement.

HIGH FILTERING

Take a deep breath.

Real innovation makes life better.

At Faber, we don't innovate for innovation's sake. We think technical progress should make things better for people and the planet. That's why we put so much effort into designing and manufacturing life-oriented products.

Years of research have allowed us to develop some pretty unique solutions. For example, Faber hoods combine superb performance with minimal energy consumption, silent operation with perfect functionality, and Italian style with unbeatable quality.

Others might stop here, but we see this only as a starting point. Because for Faber, innovation means making good things even better.

Energy saving technologies

NAUTILUS

The new Faber diffuser enables a leap in energy quality from Class C to Class A*.

It also provides high performance with low power consumption, due to its optimised geometry and the fluid dynamic analysis of the impeller.

* for built-in hoods

EVO DIFFUSER

The Energy diffuser has evolved with an optimised geometry that yields excellent results in terms of energy efficiency, reduced power consumption and noise level thanks to in-depth fluid dynamics studies.

BRUSHLESS

The brushless motor guarantees considerable energy saving coupled with high extraction efficacy. It is the most silent motor on the market and its performance remains stable in any usage condition.

ENERGY DIFFUSER

Energy Diffuser: it reduces noise up to 3dB(A) and higher hood efficiency by 30% even in the presence of long air outlet.

The technologies that make FABER hoods more effective And easy to use

REMOTE BLOWER

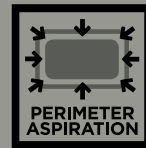

The ability to install the motor away from the hood frees it from architectural constraints and reduces noise in the kitchen.

DOUBLE ASPIRATION

Double extraction is derived from the overlapping of two glasses in vertical hoods, ensuring greater hood effectiveness.

PERIMETER ASPIRATION

Reduces the perceived sound by 25% (*).

This aspiration guarantees optimised effectiveness exploiting the principle of the Venturi effect: air accelerates as it passes through the constricted extraction space of the panel and then decreases immediately inside the hood and is then easily expelled without need for any particular pressure.

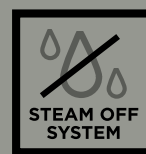

(*) Equal to a reduction of 3dB(A) according to norm EN 60704-3

UP & DOWN

The Up & Down movement of the hood is operated by remote control and allows the hood to be gently lowered towards the hob increasing its efficiency.

S.O.S

The Faber Steam Off System totally eliminates the condensation that can form under and around the hood. Air jets are released from the hood which creates two air vortices that control the intake of smoke and steam.

Technologies that make FABER hoods more functional

SPEED I

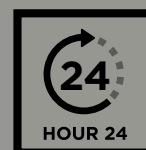

Intensive speed: function which activates maximum aspiration for 6 minutes to meet special cooking needs.

DELAY 30

Delayed switch-off: allows automatic delayed switching off of the motor to complete elimination of residual odours.

HOUR 24

The Key 24 function allows the hood to be switched on for 24 hours a day for continuous air renewal with a level of noise that is imperceptible.

FILTER ALARM

Filter saturation alarm: warns you when it is time to clean the anti-grease filter or substitute the anti-odour filter.

REMOTE CONTROL

Remote control: Faber hoods with electronic commands come with remote controls, which are particularly useful for people with reduced mobility.

COMFORT LIGHT

Courtesy light: reduced hood light intensity with the simple press of a button. Thanks to its low level of energy consumption, the courtesy light can be left on for long periods of time.

LIGHT DIMMER

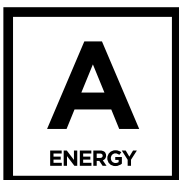

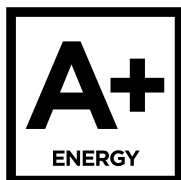

Dimmer light: adjusts hood courtesy light with the simple press of a button to meet all your kitchen needs.

CONNECTION

Creating a hob and hood that talk to each other is another first from Faber. Now you can control your hood directly from the hob, thanks to clever technology built into the induction zone.

The greenest brand.

ENERGY EFFICIENCY: HALF OF FABER'S HOODS ARE ALREADY IN CLASS A OR A+.

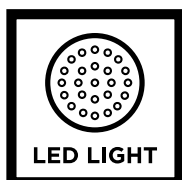

Faber hoods consume less, reduce emissions and deliver great performance thanks to the new EVO diffuser. Many models also incorporate LED lighting to enhance your kitchen, slash your energy bills and provide bright, natural light over the entire hob.

EVO DIFFUSER

Lower consumption, higher performance. Silently!

The EVO diffuser embodies the latest research in fluid dynamics and delivers amazing results in terms of energy efficiency, cost savings and noise reduction. The EVO diffuser is perfectly effective even with long extraction ducts.

LED LIGHT

Less consumption, more light. Naturally!

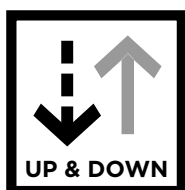

At last! A pleasant, natural light (4100°K) that shows things in their true colours. Faber's LED spots blend stylishly into the hood and provide bright light for excellent visibility over the entire cooking area. They consume less energy too!

F-LIGHT

The selection of beautiful Faber F-Light island hoods are all equipped with Up & Down technology which increases the hoods efficiency by gently lowering it towards the hob and raising it back up toward the ceiling when not in use.

UP & DOWN

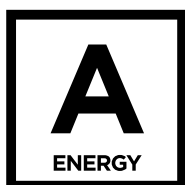

Freedom of movement.

A BRIGHT IDEA FROM FABER GIVES YOU FREEDOM OF MOVEMENT IN THE KITCHEN.

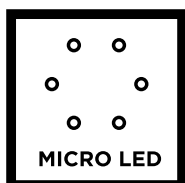

F-LIGHT: HOOD AND CEILING LIGHT IN ONE.

Exclusive technology from Faber, complete with remote control. **DOWN:** the hood descends over the hob for maximum extraction efficiency. **UP:** the hood retracts to ceiling level to let you move freely around the kitchen.

DESIGN AND WELLBEING TOGETHER IN A ENERGY CLASS.

All F-light models are in A energy class, stylish in form and unbeatable in function, Faber's F-LIGHT hoods are inspired by the latest trends in design and lighting technology. F-LIGHT technology transforms the hood into an attractive source of light for the whole kitchen. With Faber, life keeps getting better!

At last! A pleasant, natural light (4100°K) that shows things in their true colours. Faber's new Micro LED spots blend stylishly into the hood and provide bright light for excellent visibility over the entire cooking area. They consume less energy too!

Hoo-B Glass

Hoo-B

The hob also integrates the controls of the hood

HOO-B COOKTOP, THE NEXT-GENERATION FITTED HOOD

A sophisticated yet minimalist look for the new fitted HOO-B hood, which is embellished with a special aluminium trim that makes it even more stylish. The glass panel fits over the hob without interrupting the continuity of its forms and lines, guaranteeing the utmost quality at all times. The Touch control commands also make it possible to operate the hood and induction hobs with the touch of a finger.

When in use, HOO-B opens, lifting its cover and revealing its extraction surface. When you have finished using it, the cover goes back down to create a single worktop again.

For those that love pure minimalism, the new model also comes in the HOO-B Glass version with no aluminium trim.

Hoo-B must be combined to FCH32 C induction hobs

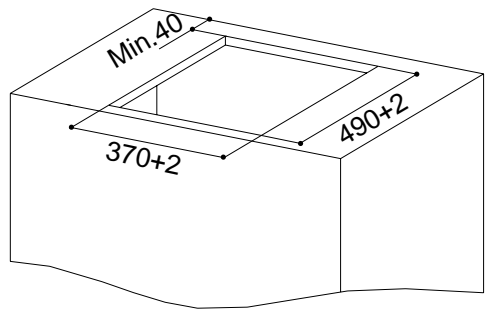

Remove the glass cover before using the hood

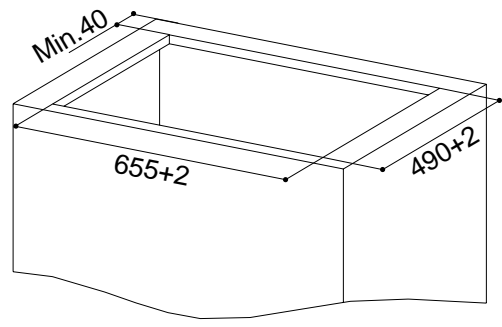

The Hoo-B hood attracts all cooking streams ensuring the maximum result of extraction completely built-in the kitchen top.

NAUTILUS

Lower energy consumption. Higher efficiency.

NAUTILUS BRINGS YOU THE FIRST EVER ULTRA-THIN, TRULY VERTICAL HOOD.

The revolutionary Nautilus motor is ultra slim at only 15cm wide. Reducing the space for the motor has eliminated the conventional slanted surface usually seen on a wall mounted hood.

NATURALLY INNOVATIVE

The motor design for this innovative diffuser is closely based on the cross-section of a nautilus shell.

Thanks to its advanced fluid dynamics and optimised shape, the Nautilus diffuser ensures an unobstructed air flow.

And despite a depth of only 15 cm, the Nautilus is incredibly efficient.

ACHIEVING EXCELLENCE IN ENERGY

The Nautilus diffuser combines superb performance with minimal energy consumption allowing the hoods to take a giant leap from an energy class C to class A.

STEAM OFF SYSTEM

Banish steam from your kitchen. Watch the humidity disappear.

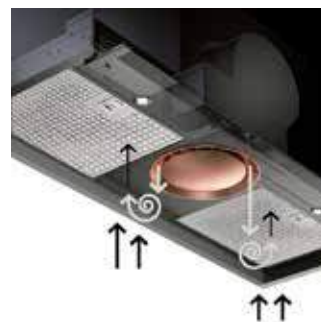

**A DOUBLY SMART WAY TO
ELIMINATE CONDENSATION - TOTALLY.
YOUR KITCHEN WILL THANK YOU.**

The SOS system injects accurately controlled, helical and variable geometry air jets into the hood. These jets create a vortex that accelerates the air upwards, increasing flow rate and the hood's ability to capture cooking fumes and steam. The result? No more condensation or grease under and inside the hood!

EXCLUSIVE COMFORT BY FABER

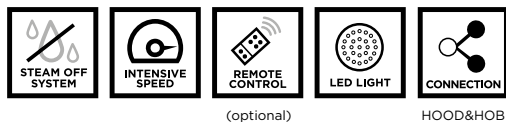

Induction hobs create a large temperature differential between the hot cooking surface and the colder air under the range hood. In the past, this always led to problems of condensation, but now Faber has the answer. If extraction leaves annoying drops of condensation under your hood, solve the problem with SOS!

INTEGRATED HOODS

Discreet, rational, silent.
Built-in hoods reduce the
aesthetic impact of the
hood in the kitchen and
integrate perfectly with
the cupboards.
An essential tool that's
invisible to the eye.

**EXCLUSIVE, CONDENSATION-FREE COMFORT**

With Steam Off System, the exclusive Faber technology, the hood not only sucks in but also emits air jets that create a vortical motion and acceleration and help to convey and capture the steam.

This puts an end to condensation and its depositing under and around the hood!
DOUBLE AIR ACTION TO COMPLETELY ELIMINATE CONDENSATION.

CONNECTION

Dialogue between hood and hob.

HOOD&HOB

**THE FIRST FAMILY OF APPLIANCES THAT TALK TO EACH OTHER.
A CHOICE OF 3 INDUCTION HOBS, FULLY
COMPATIBLE WITH 40 HOOD MODELS.**

**Creating a hob and hood that talk to each other is
another first from Faber. Now you can control
your hood directly from the hob, thanks to clever
technology built into the induction zone.**

**OUR MISSION IS TO MAKE LIFE IN THE KITCHEN
MORE ENJOYABLE.**

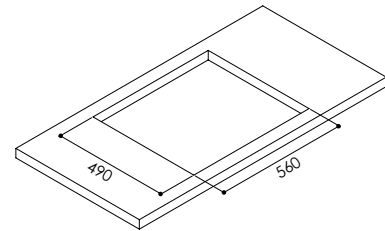

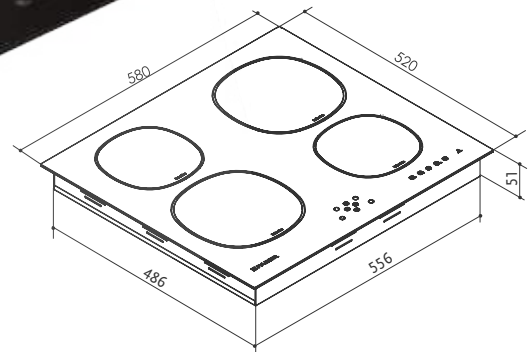

**FCH32: great performance from 2 induction zones
making it ideal for compact kitchens.**

**FCH64: a great hob with 4 different size induction
zones.**

**FCH93: 90 cm wide, with 3 induction zones for easy
pan movement in larger kitchens.**

The hob also integrates the controls of the hood

EXTERNAL MOTOR HOODS

The Faber Collection is now enhanced by a complete range of hoods with external motors in ceiling, downdraft, integrated, wall and island models.

Why choose a cooker hood with an External MOTOR:

- To eliminate the noise from the cooker hood within the home.
- Allows the motor to be located completely outside of the home.

CHOOSE THE RIGHT HOOD

The necessary extraction capacity is determined by the volume of the kitchen. An effective hood changes the air of the kitchen 10 times per hour. A powerful motor is quieter and uses less energy because it is effective at low speeds.
 -A hood does not create noise disturbance if its capacity is sufficient without exceeding 55 dB(A) of sound power.
 -A powerful motor can be efficient even at lower, quieter speeds.

1 Fan Handbook - F. Bleier 1998

Example: A 15 m² kitchen which is 3 m tall requires a hood which aspirates at least 450 m³/h. Infact: 15 m² x 3 m x 10 = 450 m³/h

Now consult the performance table found in the product catalogue. The hood is efficient if an equal or higher capacity value is found in one of the speed columns.

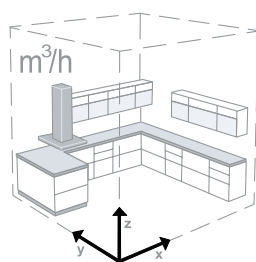

$$\text{EFFECTIVENESS} = \text{kitchen m}^2 \times \text{kitchen height} \times \frac{10 \text{ changes of air}}{\text{of air}}$$

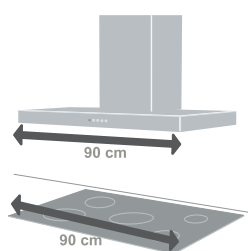

Speed	1	2	3	4	INT
Air capacity IEC point	110	195	260	313	430
Pressure	-	-	-	-	-
Input	30	45	55	70	100
Noise level	48	53	58	62	69

INSTALLATION

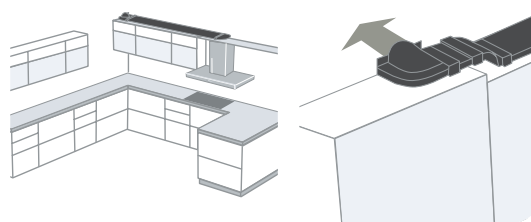

Proper installation begins with an inspection. When choosing a hood, you should know:

Kitchen volume (which determines the necessary aspiration capacity). See section "Choosing the right hood."

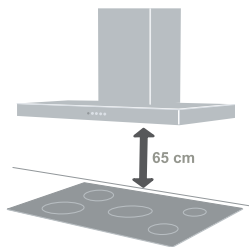

Length of the cooking top (the hood is generally as long as the cooking top area).

The position and distance of the exit hole (very long and very curved right-angled tubes limit hood efficiency).

Installation distance

The hood is to be installed at a minimum distance of 65 cm from the cooking top, except for particular models where is specified in the technical drawing and instructions manual.
ATTENTION: the product guarantee will not be considered valid if this distance is not respected.

The hood may not reach declared performance levels if the distance from the cooking top exceeds 75 cm.

Some vertical-installation models (ex. Mirror, Matrix) are to be installed lower. Check the product's technical manual.

Inspection

1 - Turn on the motor

2 - Switch on the lights

If the hood is an extraction hood, verify that it is properly connected to the exit tubing.

If the hood is a filtering hood, verify that the charcoal filters have been inserted.

First cleaning

- Remove the protective films

- Remove impurities with a damp sponge and a small amount of neutral soap

- Rinse with a damp cloth

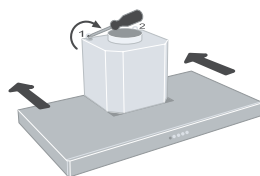

- Dry with a soft cloth. If the hood is in stainless steel, continue with

a steel glaze

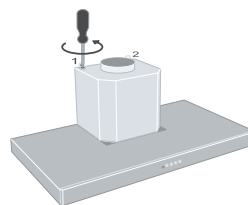

- You can give stainless steel hoods a protective treatment with the Faber Clin&Clin tissue

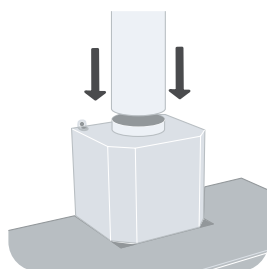

Faber hoods are easy to install because they have EASY CUBE:

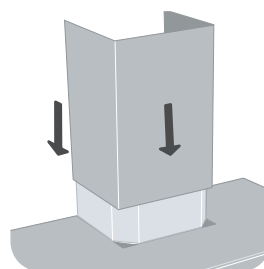

Hang the hood

Align

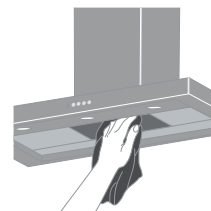

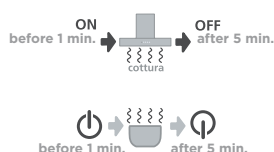

Connect tubing

Insert the chimney

USE AND MAINTENANCE

Switch on the hood a minute before cooking begins to create air flow that channels fumes and steam toward the aspiration surfaces.

If necessary, leave the hood switched on even after cooking is finished so that all steam and odours can be properly aspirated.

- Wash the metal anti-grease filters by hand or in the dishwasher every two months¹
 - Replace synthetic anti-grease filters every two months
 - Regular filter maintenance guarantees efficient hood use
- ATTENTION:** grease deposited on the filters is inflammable: be sure to perform regular maintenance

¹ These intervals of time refer to a regular use of the hood, approximately 3 hours per day

Hood cleaning

- Remove impurities with a damp sponge and a small amount of neutral soap²
- Rinse with a damp cloth
- Dry with a soft cloth, if the hood is in stainless steel, follow the steel brushing
- Clean the internal hood conduit once a year

² Acid-based cleaning products can damage hood surfaces

ANTI-ODOURS FILTERS

Long lasting filter

3
YEARS

Faber has developed a new, re-usable active carbon filter. Thanks to the multi-layer technology, the Long Lasting filter further increases filtration efficiency, with the double layer using an initial pre-filtration to capture the largest particles, and a second, more concentrated filtration to guarantee optimal air cleanliness.

The filter can be washed in the dishwasher every 3-4 months¹, for a maximum of 3 years and dries at room temperature in a vertical position to allow the water to drain out. Alternatively, it can be placed in an oven at 50°C.

¹ Normal use cooker hood, by around 3 hours per day

High performance

6
MONTHS

High-efficiency filter with a highly-concentrated carbon micro-granular structure that can guarantee more than 80% filtration capacity of intake fumes and a duration of up to 6 months, double that of a normal charcoal filter, making for economic savings of more than 20%.

CLIN & CLIN CLEANING LINE

Clin&Clin revitalising paste

Removes marks, spots and small rust stains caused by daily use, restoring a natural shine to steel surfaces.

Clin&Clin protective tissues

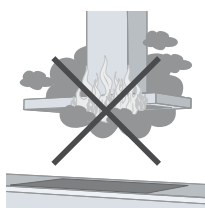

Protect and maintain the beauty of steel surfaces over time. Practical and disposable. To be applied on clean, dry surfaces.

QUALITY AND SAFETY

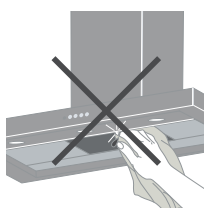

Faber hoods benefit from 60 years of competence in the treatment of kitchen air

- We were the first in the kitchen hood sector to obtain an ISO 9001 company quality system certificate.
- System integrated with Quality, Safety and Environment certified by SGS respecting the ISO 9001:2000, OHSAS 18001 and ISO 14001 norms.
- We have received the SGS Excellence Certificate, the absolute first in the world, number 001.
- All Faber hoods conform to European safety standards (EC mark of conformity), and have also been certified by the IMQ, a reliable, independent organisation further guaranteeing clients on quality (IMQ mark of security).

FABER HOODS ARE DESIGNED FOR SAFETY

Hammered internal edges and tempered glass to avoid risks of cutting.

Thermo-protected motors and self-extinguishing plastics help avoid any risk of fire.
Electronics are solid state, cables and connections are all placed correctly to avoid electric shock or dangerous sparks.

All Faber hoods have undergone safety and performance tests.

Aspiration and noise capacity have been measured according to standard norms:

- EN 61591
- EN 60704-3

unique specifications for surveying kitchen hood performance.

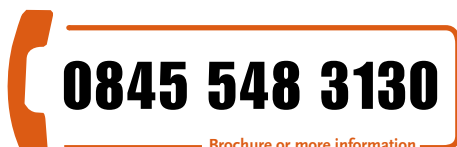

ATTENTION: Comparisons between different brand hoods should be carried out on complete data obtained according to these standards.

The Faber laboratory is NEMKO and IMQ certified.

ASSISTANCE

All Faber products are sold with a 2-year guarantee, covering parts and labour. Defects caused by incorrect installation are not covered by the warranty.

Call 0845 548 3130 for a brochure or more information

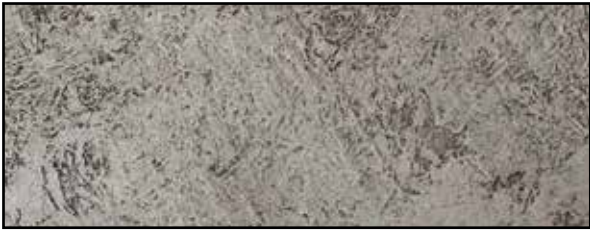

Call 0845 548 3132 for parts, servicing and warranty

KitchenEX are the only approved UK supplier of Faber Cooker hoods.

The performance shown in this catalogue is declared in accordance with the new Code of Conduct signed by the most qualified European manufacturers members of CECED (European Committee of Domestic Equipment Manufacturers), a strict code for transparency which establishes clear rules to measure air flow and noise level for hoods, common to all cooker hoods manufacturers:

- air capacity according to IEC/EN 61591 method (with the hood fitted using a ducting pipe)
- noise level according to IEC/EN 60704-3 method (sound power)
